

Axia[®] Air

Ideal for both prolonged VDU work and flexible workstations.

Closed cycle

Most VDU chairs used in the workplace are discarded after about ten years or so, which is a pretty short working life, when you think about it. Axia allows you to keep office interior costs down while also reflecting your corporate social responsibility. After years of intensive use your chair will be bought back to our premises in Zwolle, The Netherlands. On our unique disassembly line your chair will be completely stripped down, and the components returned to our supplier. Here they will be recycled into new components that will be used on your restored Axia.

Axia[®] Air

Axia Air VDU chairs

The beautifully designed back of the Axia Air can be combined with various Axia VDU chairs: Axia Office Air, Axia Pro Air, Axia Flex Air and Axia Basic Air.

This diversity ensures that the Axia Air can be deployed at a variety of workplaces and is made to suit practically every individual.

On the one hand, Axia Air is perfectly suited for use in environments which require prolonged VDU work (Axia Office Air). On the other, the chair can be seamlessly integrated in a new-style working format, in which

professional environments are mainly fitted out as flexible workplaces (Axia Flex Air).

The modern design of its star-shaped support base and the finely styled back make the Axia Air a great addition to the current Axia product range. The pelvic support height can be easily adjusted on either side of the chair. All this creates a chair that allows for relaxed working and in which the ergonomic functionality is preserved.

The Axia Air does of course also come with a warranty period of 10 years, 3 years of which are a full warranty.

Axia Air

The Axia Air is a chair that allows for relaxed working and in which the ergonomic functionality is preserved.

The back of the Axia Air is available as a single model only. At the rear, the pelvic support includes a small cushion.

In addition to black, the armrests and star-shaped support base can be finished in aluminium, polished aluminium and chrome.
